

**“Don’t buy a smoke eater from anyone, including me
until you have read this entire report!”**

**Follow our 3-step process below to learn how to eliminate your smoke and achieve a
comfortable, odor free and safe environment for customers, staff and most importantly
for yourself!**

Dear Business Owner:

Thank you for requesting our Commercial Smoke Removal Catalog and Sizing worksheet. In this document you will find our full line of commercial smoke equipment, a sizing work sheet and some more information about how we have configured our systems for maximum results. Let’s get right to it...

Action Steps:

Step 1: - Print out this document and fill out the worksheet on the next page. This worksheet asks all the questions that are required to properly size your facility for effective smoke removal. Go ahead and fill it out. Don’t have a printer? Measure up your space and give us a call with the info and we’ll take it from there.

Step 2: - Fax that worksheet to us for a fast, free, no pressure estimate. Our Fax number is 215-325-1138. If you prefer, you can fill out the quote request online at: <http://www.getthesmokeout.com/commercial-smoke-eater-quotes/> Or, just call us with the information.

Step 3: - Review our catalog and get familiar with our systems and pricing. Once we get your fax, we will be in touch with you shortly with your estimate.

Get started now and fax or call in the sizing details from the worksheet. I personally thank you and look forward to helping you achieve a safe, smoke free and odor free business.

Best regards,

Dan Buglio - Owner

Our 90-Day Satisfaction Guarantee applies to everything we sell. Either you love your new system or we’ll take it back! You’ll know within hours, but we give you a full 90 days to try it out! No restocking fees apply!! We’re that confident it works!

Free Shipping on everything we sell too!

**Commercial
Smoke Removal
Sizing Worksheet**

Note: Focus on the areas where smoke removal is important. If you are not concerned with the kitchen, office or restrooms no need to include them in the calculations.

Use of the Space: (bar, pool hall, meeting room, etc) _____

Anticipated Smoke Levels: Moderate Bad Really Bad (circle one)

Measurements:

Dimensions - room 1: _____ L x _____ W = _____ Sq. feet x _____ ceiling height = _____ cubic ft.

Dimensions - room 2: _____ L x _____ W = _____ Sq. feet x _____ ceiling height = _____ cubic ft.

Dimensions - room 3: _____ L x _____ W = _____ Sq. feet x _____ ceiling height = _____ cubic ft.

_____ Total Square Feet _____ Total Cubic Feet

Type of ceiling in each space: Suspended / drop ceiling solid (circle one)

If applicable, clearance above drop ceiling? _____ inches or _____ feet

(Note: Minimum of 13" – 18" is required for our flush mount systems)

Layout:

(Feel free to sketch a drawing of your place indicating the location of the bar, HVAC Zones, ceiling heights, supply and return vents and anything else you think we should know. Fax that to us too! Questions, call us!)

Name: _____

Business Name: _____

How do you prefer we send you your estimate? (Circle one) Call - Fax - Email

Phone Number: _____

Fax Number: _____

Email Address: _____

Smoke is comprised of two main categories of pollutants:

Visible Smoke Particles:

This is the stuff you can see - the haze in the air. Microscopic particles of smoke and ash leave the cigarette and float off into the air. First it rises. Then as it cools it settles back down. Ranging in size from .3 micron to 1 micron in size, it is critical that your system have the capability to capture these particles. However, removing the particles alone still leaves you with a problem.

Invisible Gases and Odors:

Smoke also contains over 4000 chemicals and gases, of which 50 are known to cause cancer. Did you know that people who work in a smoking environment are 50% more likely to develop lung cancer than those working in a non-smoking environment? Yes, 50% more likely!!! An effective system must have the capability to remove these gases, fumes and odors!

Unless you handle the entire problem, you are wasting your money on a partial solution.

The Competition:

Electrostatic / Electronic Smoke Eaters or Precipitators:

Many of the big name brand companies like Honeywell, Smokeeater™, Trion and SmokeMaster™ employ this technology. Used for decades in smoke removal, these devices focus primarily on the particles of smoke. Some zap, some don't. The theory here is to super-charge the particles coming through the unit and attract them to electrically charged collection trays. They work pretty well initially, but once dirty, the efficiency drops considerably. As the collection trays get coated with smoke particles, they lose their ability to attract the particles. The big problem here is that the super-charged particles go right through the unit, exit back into your air and now want to stick to something. Most likely, walls, ceilings, carpets, fabrics and worst of all, people and their clothing.

Not only that, the electronic smoke eaters zap and pop and make awful noises once the collection cells start to get dirty. They literally sound like a bug zapper. Do you want that in your business? I don't!

Electrostatic precipitators are also difficult to maintain. You need to remove the dirty collection trays, wash them in a commercial dishwasher or soak them in a big tub of expensive chemicals, let them dry out and reassemble your smoke eaters. The process is time consuming, a burden and messy to say the least. Chemical stripping is required on regular basis. They are so much of a pain to maintain that the dealers usually try to sell you a maintenance contract so you don't have to worry about it. Just more un-necessary expense if you ask me. Some of my customers were paying \$80 per machine per month for maintenance. If you have three machines, that's \$240 a month x 12 = \$2880 a year compared to just \$330 per machine in filters for our equipment.

Our Approach: HEPA / Carbon / Pre-filters:

I have bet my business for the past 11 years on a tried and true and proven approach of using a HEPA filter, Carbon filters and a bunch of Pre-filters to clean the air. With three stages of filtration and the right

amount of power, the units will definitely get the clouds of smoke out and the carbon filters will eliminate the odors. There's no way it won't work. It's really not rocket science.

Why does this work so well?

- You get 12 Pre-filters which you change monthly. These protect the carbon and HEPA filter, which adds lifespan to those filters. It takes 5 minutes to change the filters. It's super easy.
- You get 6 carbon filters with the machine. Some companies' brag about how many pounds of carbon you get. The problem is that after a while, the carbon becomes saturated from all it has absorbed and stops working on the gases, fumes and odors. Our approach is to give you fresh carbon every 2 months for consistent odor removal results throughout the entire year.
- Lastly – each machine includes an 11.5" deep 95% ASHRAE HEPA filter to filter out the smallest microscopic smoke particles. This 95% efficiency filter is the perfect amount of efficiency to get the vast majority of the smoke particles while still not clogging up too fast or slowing the air down too much. Yes, there are medical grade HEPA filters that are 99.97% effective. They would clog in a month and never allow enough air through to keep up with the smoke being created. 32 Years experience tells us that 95% efficiency is the right way to go.

Watch our video's to learn more about why our approach makes the most sense.

<http://www.getthesmokeout.com/commercial-smoke-eater-videos/>

Warning:

Please watch out for companies that say a system can cover a certain number of **square feet**. Their websites might say: One unit per every 800 or 1000 square feet. (Square feet = Length x Width) This simply is not enough information to be accurate. It's a generalization at best.

Providing us the square footage plus the **ceiling height** allows us to calculate the **cubic feet** of space which is **critical** to figuring out how much power you need. Without knowing the ceiling height and cubic feet, these companies are simply guessing at how much power will get the job done. (Cubic feet = Length x Width x Ceiling Height) i.e. there is a HUGE difference in a space with 8' high ceilings versus 15' high ceilings.

If square footage is how a company recommends equipment to size your job, they clearly don't know what they are doing and should be avoided. Also, if they tell you that electrostatic smoke eaters are **all you need** for a complete solution, they also aren't aware of the limitations of electronic smoke eaters.

Reasons to Invest in a system like ours:

- Your health
- The health of your staff and customers
- Investing in a good smoke removal system pays for itself! Keep customers around longer, spending more money and bringing back their non-smoking friends. Seriously, it happens over and over again with my customers.
- You won't be that "Smelly Bar" any longer!
- Lastly, it's the right thing to do. It benefits you, your staff, your customers and your pocket book.

Check out my amazing 90-Day Satisfaction Guarantee:

- You have 90 days to put our system to the test. Should you decide it's not right for you, you will not be charged any restocking fees. Just ask our competitors if they offer this type of guarantee.

Here's how the "GetTheSmokeOut Solution" works:

SMOKE PARTICLES:

Our SRS (Smoke Removal System) Units are the "Best in Class" in Commercial Filtration.

With three stages of filtration and high-powered fans, you can finally remove the clouds of smoke!! It's pretty simple. You need to recycle the air in your establishment 8-12 times an hour (depending on smoke levels) to keep up with all the smoke during busy times. Any fewer air exchanges per hour and the smoke is being created faster than it can be removed. At that point, you are fighting a losing battle.

You don't need some fancy, high maintenance, expensive electrostatic smoke eater to remove smoke. Use our high powered SRS commercial filtration system that is designed with enough airflow and filtration to remove the airborne smoke particles, gases, fumes and odors. We offer many sizes and configurations to fit your specific needs. (see catalog pages later in this document) From Flushmount units (*right*) that drop into your suspended ceiling tiles to box style hanging units (*above right*) with fan speeds ranging from 800 to 2000 CFM, we've got you covered.

Gases, Fumes and Odors:

Part of our three-stage filtration includes a new fresh carbon filter to be changed every two months. With fresh carbon regularly throughout the year, you will get consistent odor removal all year long.

A Complete Solution:

We have simply combined the best commercial filtration available to remove the smoke particles as well as gases and fumes and odors.

Here's what you can expect working with us:

1. Expert Advice and FREE Quotes just one fax or call away.
2. Amazingly Simple Solution, but incredibly effective.
3. Easy to Maintain – change the pre-filters monthly, carbon filters every two months and HEPA filter annually. Annual filter kits, just \$330 per unit.
4. **90-Day Satisfaction Guarantee** with no restocking fees. Ask our competitors if they offer this type of guarantee.
5. It really works. How could we guarantee your satisfaction and assume all that risk?
6. **10 Year warranty** on the SRS filtration machines.
7. Free Shipping and Freight - unheard of in the commercial equipment industry!
8. Our solution offers results not available anywhere else!
9. Lease financing available for qualified customers. Spread out those payments!
10. Fanatical Customer Service – Before, during and after the sale! Need support after hours and ON WEEKENDS? Leave a message and we'll call you back!

Just ask yourself:

- With our strong guarantee
- We assume all the risk
- An approach to smoke removal that just makes plain sense
- Excellent technology that actually works and is easy to maintain
- Fanatical customer service

Why shop anywhere else???

What's next?

If you haven't done it yet, go back and fill out our sizing worksheet and fax it to us now. Don't have a fax machine? Fill it out and give us a call. Don't have a printer? Write it down on a napkin and give a call. We'll take the details down by phone and work the quote from there.

Residential/Small Office Smoke Eaters:

- Ideal for Smoke and Odors
- Also Great for Allergies and Asthma
- Smoke Stomper Price \$749 delivered

Home and Office Smoke Removal

The Smoke Stomper air cleaning technology is outstanding for removing smoke particles and odors. It is also excellent at removing dust, dander, pollens, molds and other airborne contaminants that can cause allergy or asthma attacks.

Our Smoke Stomper is a floor standing unit with casters making it easy to place and move from room to room.

How They Work:

The Smoke Stomper is a three filter system. For most home smoking situations, this set of filters should last you a year. Change the pre-filters every two months and the other two filters annually.

- 6" HEPA filter
- 1" Granulated Carbon Panel
- 6 1/2" Carbon pre-filters

Replacement Filters: An annual filter kit comprised of the above filters sells for \$239 delivered.

PR6: \$749 delivered with the full set of filters.

- Dimensions: 24" High x 13" Wide x 14" Depth
- Fan speed: True 350 CFM (cubic feet per minute), 2 speed fan
- Electrical: 110V standard three prong plug
- Warranty: 10 year limited warranty on parts
- Noise level: 63 decibels (quieter than all the competing models.)
- Weight 40 lbs
- Black or Wood grain finish available

Our Top Pick for Homes and Offices with Smokers!!!

Available Colors:

SRS 800 at a Glance:

- Ideal for 7.5' - 9' ceiling heights
- 1 unit per 4,500 cubic feet of space provides 8 air exchanges per hour
- Price **\$1495 delivered**

SRS 800 Smoke Removal System

Our powerful HEPA Based Air Cleaning system is outstanding on smoke and odors.

Installation:

The **SRS 800** HEPA Air Cleaner is equipped with 4 eye bolts installed 16" on center on top of each system for easy installation. The installation hardware also includes: 4 "S" hooks, 4 eye lags and industrial hanging wire.

It is recommended that the **SRS 800** Air Cleaner be installed in areas that have 7.5 - 9 foot high ceiling heights.

One years worth of filters included FREE.
(Annual Filter cost: \$330)

Filter kit includes

- 12 - 1/2" Tacky Pre-Filters
- 6 - 1/2" Carbon Filters
- 1 - 12" H.E.P.A. Filter

Specifications:

- 800 True CFM / 625 CFM with filters installed. (CFM = cubic feet of air per minute)
- Wire Hung, Ceiling or Wall Mount
- 23" L x 24" W x 12" H
- Black, Wood grain or White Finish – see below.
- Shipping Weight - 60 lbs.
- 2.1 amps, 120V, Two speed
- 10 ft. power cord, 3 prong grounded plug
- Three Filter System: HEPA, Charcoal, Pre-Filter
- All systems carry a 10 year motor/blower warranty
- All electrical components and fan motor are UL Listed and CSA Certified.

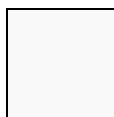

How it works:

Our Ceiling mount HEPA Air Cleaners draw the smoke and other airborne pollutants into the unit with its strong 800 CFM fan, 95% of the smoke particles are removed with each pass. The remarkably clean air is then discharged back into the room providing a healthier air for your patrons and staff to breathe. Practically all of the smoke particles, dust, dirt, pollen and other contaminants are removed from the air passing through the air cleaner. Even the microscopic airborne particles are trapped. Our HEPA Air cleaners are *VERY* effective Smoke Eaters!

Installation:

The **SRS 2000 Flushmount HEPA Air Cleaner** is designed to fit easily into a suspended ceiling. It replaces either a 2'x4' tile or 2-2'x2' tiles. Clearance above the suspended ceiling must be 18". The weight of the system does not rest on the ceiling grids but is secured above the suspended ceiling to a permanent structure like a joist or beam.

It is recommended that the **SRS 2000 Flushmount Air Cleaner** be installed in areas that do not exceed 13 foot high ceiling heights.

One years worth of filters included FREE.
(Annual Filter cost: \$330)

Filter kit includes

- 12 - 1/2" Tacky Pre-Filters
- 6 - 1/2" Carbon Filters
- 1 - 12" H.E.P.A. Filter

Specifications:

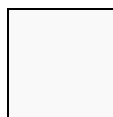

- 2000 True CFM / 1500 CFM with filters installed. (CFM = cubic feet of air per minute)
- Installation: Suspended Ceiling
- 46.75" L x 23.75" W x 17" H (Requires 18" of clearance above drop ceiling)
- White or Black Finish – custom colors available at additional cost.
- Shipping Weight - 95 lbs.
- 9.6 amps, 120V, Two speed
- 10 ft. power cord, 3 prong grounded plug
- Three Filter System: HEPA, Charcoal, Pre-Filter
- All systems carry a 10 year motor/blower warranty
- All electrical components and fan motor are UL Listed and CSA Certified.

How it works:

Our Ceiling mount HEPA Air Cleaners draw the smoke and other airborne pollutants into the unit with its strong 2000 CFM fan, 95% of the smoke particles are removed with each pass. The remarkably clean air is then discharged back into the room providing a healthier air for your patrons and staff to breathe. Practically all of the smoke particles, dust, dirt, pollen and other contaminants are removed from the air passing through the air cleaner. Even the microscopic airborne particles are trapped. Our HEPA Air cleaners are *VERY* effective Smoke Eaters! Available in black and white, custom colors available for an added cost.

AC/Heat Duct Air Purification System

The **HVAC UV System** is designed to eliminate sick building syndrome risks by reducing odors, air pollutants, VOCs (chemical odors), smoke, mold bacteria and viruses*. These HVAC-UV lamps are easily mounted into air conditioning and heating systems air ducts where most sick building problems start. When the HVAC system is in operation the HVAC-UV lamp creates an Advanced Oxidation process consisting of: Hydro-peroxides, ozonide ions, super oxide ions and hydroxide ions. All are friendly oxidizers. By friendly oxidizers we mean oxidizers that revert back to oxygen and hydrogen after the oxidation of the pollutant.

Why Use HVAC UV Technology?

Germicidal UV light rays have been used for decades by the medical industry as a method for destroying micro-organisms (germs, viruses, bacteria). UV light is dependable and can be easily installed in HVAC ducts or a plenum. Germicidal UV light is effective in reducing only the airborne micro-organisms that pass directly through the light rays. However, germicidal UV light has little to no effect on gases, vapors or odors. Our HVAC UV systems, on the other hand, are very effective on gases, vapors, VOCs and odors.

With the HVAC-UV lamp System, micro-organisms can be reduced by over 95%. Gases, VOCs and odors can also be reduced significantly, and the room will have fresh, clean and odor free air.

Installation:

The HVAC-UV lamps will need to be installed in the supply side ductwork just after the heating/cooling process and prior to the first supply vent. It is recommend that a 15 amp electrical outlet be installed (if not present) within 6 feet of the duct. You will want to have these outlets be controlled by light switches so you can turn the processing on and off easily as noted above. However, for maximum benefit, the HVAC UV lamps and your fans should run continuously.

Installation is accomplished by cutting a 4" round hole in the duct, sliding the lamp into the duct and using either sheet metal screws or duct tape or both to attach the plate to the outside of the duct.

Note: Due to the nature of installation and electrical dangers, it is *required* that you have a certified electrician or HVAC contractor install this component of the system.
